

European experts in agricultural water management gathered at Arvalis South-West station

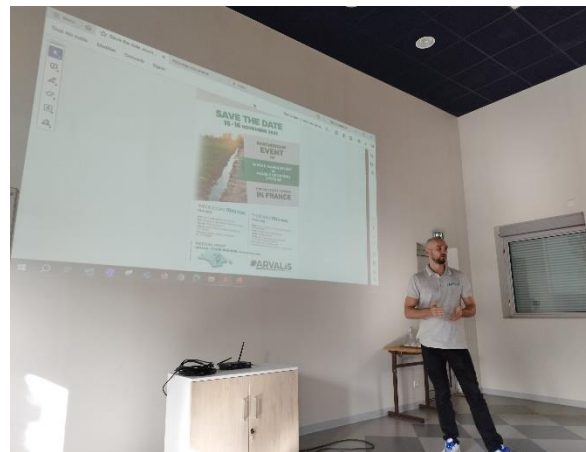

A look back at the Partnership Event organized by ARVALIS in November in its station of Baziège, bringing together 10 European R&D organizations that are also scientific experts in water management in arable cropping systems.

Four main thematics addressed as essential ingredient for the agroecological transition

Lots of fruitful discussions about the following thematics:

- Science and Nature-Based solutions for water management
- Optimization of irrigation equipment and practices
- Water Reuse
- Tactic & strategic measures to tackle climate change

During 2 days, all participants presented their ongoing R&D activities, enabling to share scientific insights and identify potential future European project opportunities.

Besides enjoying spending some time in the beautiful city of Toulouse, it was also the occasion to visit the Lauragais agroecological [Syppe](#) platform hosting long-term trials to test diversified cropping systems and assess their performance from technico-economic and environmental point of views.

Partners having attended the ARVALIS 2023 Partnership Event edition

- ICARDA (International Center for Agricultural Research in the Dry Areas)
- Wageningen University & Research
- ILVO Living Lab Agrifood Technology
- Inagro vzw
- INTIA
- ADAS
- CRA-W Centre wallon de Recherches agronomiques
- Cicytex
- FUNDECYT-PCTEX
